

Team Meeting 2

05 SEPTEMBER 2022/ 19:30 / ONLINE

Attendees

Ke, Oliver, Xavier, Tommy, Glendon

Agenda

- ☒ Discuss the new dataset that was just released
- ☒ Go over the team's progress
 - ☒ ETL Script
 - ☒ Tag Transform
 - ☒ Geospatial Visualization

Notes

- With the new data, Oliver was having trouble joining the new tables together.
- Going through the tag transformation
 - Oliver wants to perform analysis on each individual tag, so that analysis per tag can be performed.
 - Ke wants to perform analysis on the tag rows so that analysis is less granular.
 - This was “parking lotted” for the two of them to meet about and discuss later.
- Tommy still cannot read the files correctly
 - Action item for Xavier/Tommy to investigate.
- Tommy and Glendon discuss their investigations of the data
 - Not many outliers were found
 - Geospatial vis was not worked on.

Action Items

- Ask Calvin about the tags (granularity of analysis).
 - Maybe mention Salesforce.
- Look at the official Python Logger and consider using that (Xavier).
- Change the number of '==' printed in the Logger header files.
- Investigate Tommy's issue with reading datasets (Xavier and Tommy).

- Summary notebook detailing missing values/outliers.

Next Meeting

Planned for Thursday during the workshop.
